

RHODODENDRON – HYBRIDS

**** varieties available from Autumn 2016

VARIETY	FLOWER	CONT.	HEIGHT	PRICE Euro
All shrubs with flower buds				
Abendsonne Bell-shaped, orange-red flowers. In this colour group it is reconciling from the most valuable varieties. Flowers are opening successively what considerably the blossoming period is extending. Compact, round habit of the bush. High frost resistance -26°C.	<i>orange-red</i>	C5	25-35	5,70
Alfred The variety with waved, light violet flowers with olive green fleck. The torus of a flower is lighter-coloured. The flowers bloom at the turn of May/June. Hardy to -25°C.	<i>violet</i>	C5	25-35	5,70
Ann Lindsay The variety with red-white flowers in the second half of May and compact shrub habit. Hardy to -24°C.	<i>red- white</i>	C5	25-35	5,70
Artmeyer's Späte Standard variety with pink flowers. At the age of 10 years the shrub reaches the height of 150 – 170 cm. One advantage of these shrubs is their late blooming season – at the time when most rhododendrons have already shed blossom. High frost resistance -24°C.	<i>dark pink</i>	C5	25-35	5,70
Azurro Very expressive colour. Intensive dark violet flowers with big dark eyelet. Blooming time at the end of May. Medium-strong growth. Hardy to -26°C.	<i>violet with purple eyelet</i>	C5	25-35	5,70
Bariton Shrubs are decorated with magnificent and wide open flowers, with an extensive almost black eye. The shrub grows compactly, not very strongly. At the age of 10 years the shrub reaches the height of 130-150 cm. Frost resistance -20°C.	<i>violet with big eyelet</i>	C5	25-35	5,70
Bernstein dichroanthum Shell pink buds open to pale bright yellow flowers in May to June. A new variety. Grows wide, quite loosy. During frosty winter upper shrub may damage. Frost resistance -22°C.	<i>light cream-brown</i>	C5	25-35	5,70
Blutopia Strong growing variety, hardy to -24°C. The flowers in violet with olive-green fleck and light waved edges. Blooming time at the end of May.	<i>violet with olive eyelet</i>	C5 C15	25-35 40-50	5,70 14,50
Bolesław Chrobry / Royal Lilac® Purple flowers with a delicate, brown eyelet. This variety grows intensively, has a dense habit. Elongated leaves, turned up slightly. Frost resistance up to -30°C.	<i>violet with light brown eyelet</i>	C5 C15	25-35 40-50	7,20 16,20
Brasilia wardii Orange variety. Orange-yellow wavy flowers, gathered in dense flower heads. Slow dense growth. From our observations it follows that these bushes are the most frost-resistant in this variety. Frost resistance -20°C.	<i>orange-pink</i>	C5	25-35	5,70
Brigitte insigne Flowers with pink edges, lighter inwards, in the centre – white with olive-green eyelet. Slow growing variety. 15-year old shrubs grow 110 cm tall and 160 cm wide. The flowers bloom at the end of May, beginning of June. Hardy to -21°C.	<i>cream- pink</i>	C5 C15	25-35 40-50	5,70 14,50
Brisanz- heamatodes Sensational new variety! Purely red flowers, free of any violet addition. Unlike other red varieties, this one grows slowly and densely. Propagates and thickens well. Blooms early, at the same time as the Rh. repens variety. Frost resistance -22°C.	<i>red</i>	C5 C15	25-35 40-50	5,70 14,50
Burgundula Splendid, dark-violet colour of the flowers with a large, nearly black eye. Apart from 'Polarnacht' – this is the darkest of all varieties. Strong growth. Frost resistance -22°C.	<i>dark violet</i>	C15	40-50	14,50

VARIETY	FLOWER	CONT.	HEIGHT	PRICE Euro
All shrubs with flower buds				
Busuki	<i>red</i>	C5	25-35	5,70
Super new in the red varieties. The sharp red colour of the flowers will not let you simply pass by the blooming bushes which grow not too strongly, densely, and propagate well. Characteristic leaves – lengthened, pointed leaves with light edges and visible veins. Frost resistance -26°C.		C15	40-50	14,50
Calsap	<i>white with purple eyelet</i>	C5	25-35	5,70
White flowers with big, purple eyelet are characteristic for this variety. Wide, loose shrub habit, strong growth. Flowering at the turn of May/June. Frost resistance -30°C.		C15	40-50	14,50
Catawbiense Album	<i>white</i>	C5	25-35	5,70
Standard strongly growing variety, the shrubs' habit is typical of rhododendrons. Pure white flowers with olive-coloured spot. Very healthy variety with high frost resistance -30°C.				
Catawbiense Grandiflorum	<i>light lilac</i>	C5	25-35	5,70
Strong growing variety. Flowers at the beginning of June are light lilac. Full frost hardy to -30°C. Well known and friendly plants.		C15	40-50	14,50
		C35	60-80	33,50
Cheer	<i>light pink</i>	C5	25-35	5,70
One attraction of this variety is its frequent partial blooming in autumn. Light pink flowers. The shrub grows not very strongly, broadly. Frost resistance -22°C.				
Cunningham`s White caucasicum	<i>white</i>	C5	25-35	5,70
Slow growing, compact shrub with dark green leaves. White flowers appear very early. Frequent blooming in autumn. Hardy to -21°C.		C15	40-50	14,50
Diadem	<i>pink with deep-red eyelet</i>	C5	25-35	5,70
Strong growing variety with shining, dark-green leaves. Flowers pink, petals edges a little bit darker. On the upper petal strong contrast makes wide red fleck, which changes into deep-red at the torus.				
Dominik calophytum	<i>light pink with deep-red eyelet</i>	C15	40-50	14,50
New variety with flowers already at the beginning of May. The flowers are big, light pink, dark deep-red at the torus. After blooming period a shrub is decorated with very large leaves. Sufficient strong growing shrub. Compact habit. Hardy to -20°C.				
Dr. H. Dresselhuys	<i>red</i>	C5	25-35	5,70
Red colour of the flower with delicate violet. He is blooming on the turning point of the May and the June. It is growing strongly, 10-years old shrubs have 180cm height and 160cm width. Frost hardy to -26 °C.				
Erato®	<i>dark red</i>	C5	25-35	5,70
Ruby red colour of the flower, keeping steady in the blossoming period. Delicate, wavy and corrugated edges of scraps. He is blooming on the turning point of the May and the June. It is growing strongly, straight, densely. Frost hardy to -27°C.				
Eskimo	<i>white</i>	C5	25-35	5,70
The variety with white flowers, which open in pale lilac. Green-gold fleck inside the flower. The flowers [end of May, beginning of June] are great. Strong, upright and dense growing shrub. Frost hardy of shrub to -27 °C.		C15	40-50	14,50
Flautando fauriei	<i>orange - cream</i>	C5	25-35	5,70
Sophisticated colour of flowers. Bell shaped flowers are orange- cream. Darker and dotted fleck. Requires quiet places. Frost hardy to -26°C.		C10	35-40	14,50
Fluidum	<i>light orange</i>	C5	25-35	5,70
Wonderful orange flowers with delicately speckled eye on yellow background make this variety a leader in the orange varieties. If its high frost resistance is confirmed, it may well turn out to be the best variety in this group. Frost resistance -21°C.				
Francesca	<i>dark red</i>	C5	25-35	5,70
Huge flowers in dark red. The variety should grow in twilight, when they do not change the colour during coming out of bloom. Upright habit, sufficient strong growing shrub. High frost resistance to -30°C.				

VARIETY	FLOWER	CONT.	HEIGHT	PRICE Euro
All shrubs with flower buds

		120-140	125,00

AZALEAS

Knapp – Hill, Mollis, Ghent and other strongly growing azaleas.

This is a group of shrubs with fabulously colourful flowers. With their lesser requirements they settle for much worse habitat conditions. At the age of 10 years they reach the height of 1 – 1,5 m.

Splendid enormous flowers with wavy petal edges, orange, red, and pink in colour – these are the characteristics that distinguish the Knapp-Hill azaleas. The beauty of the other varieties is in no way second to that of the of the foregoing group. They include shrubs with smaller but fragrant flowers or building wonderful “pompon” inflorescence.

BLUEBERRY

(*Vaccinium corymbosum*)

**** varieties available from Autumn 2016

The blueberry plants are very well rooted, hardened off and well-branched from the very plant shoot. Bushes are produced by the micro-cutting method developed in our nursery. Frost hardiness follows Brazelton 2000.

Varieties produced under license:

Aurora[®], Draper[®], Liberty[®]**** 2-year old C2 35-45 2,70

The material in the varieties Aurora, Draper, Liberty in C2 container is offered exclusively for plantation. The referenced varieties are covered by our Dutch partner blueberry nursery - producer's license. The license fee is 0.50 €.

VARIETY	CONT.	HEIGHT	PRICE Euro
Varieties are presented in order of fruiting time			
Chanticleer**** NOVELTY!	2-year old	C2	35-45 2,70
Very fertile variety of average growth strength and upright habit. Fruit - medium size, sweet and sour. One of the earliest maturing varieties of blueberries with a long period of fruiting. Blooms late, after the spring frost.			
Earliblue	2-year old	C2	35-45 2,70
Strong and wide growth of shrubs. The variety ripening very early – in the beginning of July. Great and medium, very tasty fruits covered with intensive, blue wax coating. The fruits from later crops tend to be tiny. Good point of this variety is abundant fructification and sufficient hardiness.			
Duke****	2-year old	C2	35-45 2,70
The fruits begin to mature in second week of July. Good fructification. Growth of plants strong, loose, spherical sort. For good bearing fruit one should regularly illuminate. Collected into circles, firm, very tasty, covered with the intense waxy bloom fruits of the diversified size. It fits for the processing as well as to the direct consumption. According to American data comparable to the Bluecrop variety. In countries of western Europe found at present best, early bearing fruit variety.			
Spartan	2-year old	C2	35-45 2,70
The fruits begin to mature few days after Earliblue variety. Big, dark blue very tasty fruits covered with wax-coating. Vinous-sweet greenish flesh. The shrubs grow very strong and are frost hardy. The variety requires good fertilization.			
Patriot****	2-year old	C2	35-45 2,70
American novelty, very promising in our climate. The shrubs grow 120-180 cm tall, the sprouts are raised. The fruits begin to mature in the beginning of July. The fruitfulness amounts to 4.5-9 kg / shrub. Great fruits, 49 berries/0.25 l, tasty, with strong skin and high quality. First berries are manually picked. Later on the berries may be mechanically picked. The fruits from later crops are smaller, 60 berries/0.25 l. This variety grows better on sunny and warm stands, then crops are greater with better quality. They are suitable for industrial and amateur plantings. Frost hardy to -34°C. <i>It is assumed to be resistant to Phytophthora cinnamomi.</i>			
Bluejay	2-year old	C2	35-45 2,70
Strong growing variety. Spreading shrub habit of elder plants. Quite big, light blue, aromatic fruits gathered in loose clusters. The variety ripening at similar time as Bluecrop. The berries can be mechanically picked which is one of the best points of this variety. Sufficient frost and disease hardiness. Requires frequent cutting and watering.			
Goldtraube	2-year old	C2	35-45 2,70
Delicious blueberry variety, blooms in mid-summer. Perfect for freezing, does not lose the flavour. The fruit does not dirty your mouth. Grows better when there are a few of them around. Fast-growing variety with fruit larger than the average blueberries.			
Toro	2-year old	C2	35-45 2,70
New variety with big and very aromatic fruits, maturing in the same time. Fruits begin maturing in the end of second week in July. Fruits grow loose in long coatings, looks similar to bunch of grapes. Very promising variety. The fruits are known as the best for straight consumption. Suitable for industrial plantings and mechanical picking.			
Sierra	2-year old	C2	35-45 2,70
Promising novelty. Fruits great and tasty. Among novelties this variety has abundant fructification. The fruits mature few days before Bluecrop.			
Bluegold	2-year old	C2	35-45 2,70
Early variety, classified as weakly growing. Proliferates easily, produces large flat fruit with green waxy bloom. Recommended for amateur cultivation.			

HALF-HIGH BLUEBERRY

(*Vaccinium corymbosum* x *Vaccinium angustifolium*)

Varieties produced under license: **Aino®**, **Alvar®**, **Arto®**, **Jorma®**

The material in the varieties Aino, Alvar, Arto, Jorma in C2 container is offered exclusively and covered by MTT Laukaa breeder's license. The additional license fee is 0.30 €.

VARIETY	CONT.	HEIGHT	PRICE Euro
Aino®**** NOVELTY! Half-high blueberry with high frost resistance. Habit thick, compact. Fruits with a mild, sweet taste, aromatic, rich in anthocyanins. Very fertile. Promising novelty, recommended for amateur planting.	2-year old C2	30-40	2,70
Alvar®**** NOVELTY! Half-high blueberry with high frost resistance. Early fructification period. Habit of shrub dense, low. Fruits with a mild, sweet taste, very tasty, rich in anthocyanins. Promising novelty recommended for amateur planting.	2-year old C2	30-40	2,70
Arto®**** NOVELTY! Half-high blueberry with high frost resistance. Grows fast, similar to highbush blueberry. Fruits with intense sweet taste, slightly sour, aromatic, rich in anthocyanins. Promising novelty recommended for amateur planting.	2-year old C2	30-40	2,70
Jorma®**** NOVELTY! Half-high blueberry with high frost resistance. Yield 2-3 times in a year. Habit erect, growth strong. Fruits with a mild, sweet and sour taste, rich in anthocyanins. Promising novelty, recommended for cultivation by amateurs.	2-year old C2	30-40	2,70
Northblue (<i>Vaccinium corymbosum</i> x <i>Vaccinium angustifolium</i>) Semi-dwarf variety. Hybrid of low and high growing blueberry, grows up to 60-120 cm. Dark blue fruit, not too big but very sweet. Grows well even in not so favourable soil conditions. In view of the shrub's low requirements and small size, it is particularly suitable for planting on allotments. Recommended for cultivation in severe climatic conditions. Very high frost resistance.	2-year old C2	30-40	2,70
North Country (<i>Vaccinium corymbosum</i> x <i>Vaccinium angustifolium</i>) The shrubs are the smallest in size of all blueberries. Height up to 45-60 cm. Dark-coloured fruit approximates with 1 cm in diameter. Resistant to low temperatures. Exclusively for amateur cultivation.	2-year old C2	30-40	2,70
Pink Lemonade NOVELTY! Sensational novelty of pink fruit colour rare among high blueberry! The shrub grows slowly, grows up to 1.5 m in height. Habit - compact, very dense. Leaves oblong and glossy. Fruits small, sweet, and aromatic, in the maturing stage; assumes a dark pink colour. Late fruiting variety-in late August and early September, very fertile. Autumn Leaves turn from a golden to a red colour.	2-year old C2,5	35-45	3,75

SERVICEBERRY

(*Amelanchier lamarckii*)

Serviceberry is a kind of fruit-bearing shrub belonging to the family Rosaceae, naturally occurring in the areas of North America. Due to the taste and health qualities of the fruits as well as the decorative look of the shrubs throughout the year, they are very popular in Canada and are becoming a promising novelty in European countries. Fruits are mild in taste, sweet, purple and dark blue. It's fruiting from mid-June to mid-July. Habit loose, upright. Reaches about 2-5m in height depending on variety. The shrub is completely resistant to frost.

VARIETY	CONT.	HEIGHT	PRICE Euro
Amelanchier lamarckii Fruit-bearing shrubs, belonging to the family Rosaceae, naturally occurring in North America. In the spring time serviceberry blooms generously with delicate white flowers, in the summer gives mild in flavor, sweet, purple and dark blue fruit. Resistant to pests and diseases. It has low cultivation requirements, prefers permeable soil with a pH slightly acidic to neutral.	C2	40-60	2,50
Amelanchier arborea 'Robin Hill' High shrub or small tree. It flowers generously and early. White flowers, pink in bud, fragrant. Fruit small, approx. 8 mm, edible. In autumn the leaves get red tints.	C3	40-60	5,00
Amelanchier bartramiana 'Eskimo' Even young shrubs bear fruit. Fruit red before ripening, ripe burgundy-purple; sweet, very tasty.	C2	40-60	5,00
Amelanchier 'Prince William' Stunning variety of serviceberry. Ripe fruit are juicy-red to burgundy. Bear fruit abundantly even small shrubs, even at the nursery.	C2	40-60	5,00
Amelanchier rotundifolia 'Edelweiss' The smallest variety in the group of serviceberries, grows up to 2,5 m. It blooms profusely in April with large white flowers. Fruit red before ripening, ripe are very dark, almost black; sweet, tasty, like the other varieties willingly eaten by birds.	C2	40-60	5,00

MINI KIWI

(*Actinidia arguta*)

Actinidia (mini kiwi) is North-East Asia originated, vigorous, frost resistant climber with aromatic fruit, resembling a small kiwi appearance and size similar to a walnut. Due to excellent, sweet and sour taste of fruit and their high health benefits (much higher than the classic kiwi) mini-kiwi is sensational novelty. Fruits are valuable due to the antioxidant properties, high content of vitamin A, C, K and E, fiber, folic acid and actinidin enzyme, which improves digestion. The peel of fruit is very delicate, so they can be eaten without peeling. Actinidia is mostly dioecious, fruiting requires both male and female plants. It's flowering in May. It starts bearing fruit at the age of about 3 years. In autumn the leaves turn into attractive yellow color. It grows up to 6m and has no special cultivation requirements.

VARIETY	CONT.	HEIGHT	PRICE Euro
Ananasnaya Russian mini-kiwi variety, characterized by a very high frost resistance. Red, tasty and aromatic fruit. They are suitable to eat with the peel. Bear fruit in October. Variety recommended for plantations. Bear fruit even 2-year-old plants.	C2	60-80	2,70
Geneva Earliest ripening variety of Actinidia. The fruit ripens in mid-September. It requires supports and sunny position. Very high frost resistance of -30°C. Like other Actinidia requires a pollinator for fruiting.	C2	60-80	2,70
Julia The fruit is very large, sweet, yellow-green, oval. They ripen in September. Self-pollinating variety, even young plants bear fruit.	C2	60-80	2,70
Jumbo Very hardy and fast growing variety. Fruit green, large, two times bigger than at plants typical for this species. The fruit ripens in October.	C2	60-80	2,70
Ken's Red The fruit is large, up to 4cm long, green; sunlit become purple. They ripen in late September / October. Very delicious, can be eaten unpeeled. Variety is very fertile.	C2	60-80	2,70
Kokuwa Bisexual variety with the same characteristics as variety Issai. Fruit delicious, with a taste of honey. Bears fruit from mid-September to late October. Even young plants bear fruit.	C2	60-80	2,70
Purpurna Sadowa Very fertile variety. Fruit red, oval, approximately 3,5 cm long, very tasty. Results in the end of September.	C2	60-80	2,70
Rogów Very fertile variety, originated from Polish breeding. Bear fruit in late September. Fruits green, sweet and sour, aromatic. They ripen in September-October. Fruit arise already at young plants.	C2	60-80	2,70
Weiki F Female variety. Fruit length of about 3 cm, green, at the sunlit side red brown, ripen in October, but you can pick them up a little bit earlier, which ripen during storage. Even young plants bear fruit.	C2	60-80	2,70
Weiki M Male clone of Actinidia, which should be planted approx. every fifth shrub in order to obtain fruit on the female shrubs	C2	60-80	2,70

(*Actinidia kolomikta*)

VARIETY	CONT.	HEIGHT	PRICE Euro
Adam Male Actinidia's variety with fragrant flowers. It flowers in May. Green leaves with white-pink ends.	C2	60-80	2,70
Dr Szymanowski Polish variety of Actinidia with very sweet, aromatic fruits, which are a rich source of vitamin C. It has a long fructification period (from August to the end of autumn). An additional advantage is ornamental foliage. High frost resistance up to -35°C.	C2	60-80	2,70

BLUE HONEYSUCKLE

(*Lonicera caerulea L. var. kamtschatica*)

Blue Honeysuckle is a fruity shrub native to north-eastern Asia, which is growing in popularity due to its health benefits and taste. Fruits are blue, oblong, sweet-sour, 3-4cm long, covered with wax coating. High fertility obtained 2-3kg of fruit from one shrub. For good fruiting you should plant at least 2 varieties side by side. Its fruits generous, very early (mid-May). The shrub has a high resistance to drought and extremely high frost resistance – over 40 degrees. Due to its low growth requirements and early fruiting, it is a promising alternative to American blueberry.

VARIETY	CONT.	HEIGHT	PRICE Euro
1-17-59	C1	20-25	2,10
	C2****	25-35	2,50
Russian variety of very large shrub, reaching over 2 cm long, with a sweet and sour taste, and long lasting. Variety of very high frost resistance.			
Amphora	C1	20-25	2,10
	C2****	25-35	2,50

Quite a strong growing variety. Fruit - big, oblong, slightly acidic, tasty. Habit - dense, stocky. Stem - rigid and upright. Leaves - intense green, oval, of length 5-8cm.			
Lebeduska	C1	20-25	2,10
	C3****	25-35	2,50
Russian fertile variety of wide-spreading habit. Fruit of medium size, barrel-shaped, supple, and of thick skin and sweet taste. Distinguished by a low susceptibility to shedding. Fruits in May.			
Leningradskij Velikan	C1	20-25	2,10
	C1,5	25-30	2,50
	C2****	25-35	2,50
Quite fertile variety grown at the experimental station in Pawłowska. Fruit - big, sweet, barrel-shaped, covered in a wax coating. Ripens in May. Shrub growth- strong, habit - dense and upright. Reaches up to 1,8m in height.			
Morena	C1	20-25	2,10
	C2****	25-35	2,50
Very fertile, Russian variety of blue honeysuckle. Upright habit, dense, medium growth strength. Fruit - very big, oval, with a wax coating, of sweet and sour taste and blue colour. Fruits in May.			
Nimfa	C1	20-25	2,10
	C2****	25-35	2,50
Very fertile Russian variety grown by Nikolai Wawilow, of medium growth strength, attaining about 1,5m in height. Leaves slightly rolled up. Fruits very big- they reach up to 2,5cm in length, sweet, aromatic, barrel-shaped and uniform surface. Ripens in May, about 1 week later than other Russian bred varieties.			

VARIETY	CONT.	HEIGHT	PRICE Euro
Rebeka	C1	20-25	2,10
	C3****	25-35	2,50
This very early fruiting variety has blue fruits of 1cm diameter and 2,5-3cm length. Fruits are very tasty with a sweet and sour flavour. Plant grows up to 1,5m. For better fructification 2 different varieties should be planted together			
Siniczka	C1	20-25	2,10
	C1,5	25-30	2,50
	C2****	25-35	2,50
Variety of medium growth strength and erect habit, growing up to 1.5m in height. Fruit - big, sweet and sour, very aromatic, with a wax coating. Ripens at the end of May.			
Sinogłaska	C1	20-25	2,10
	C3****	25-35	2,50
Variety quite fast growing, with upright habit, growing up to 1.8m high. Fruit - oblong, covered with a delicate wax coating, navy blue in colour and length of about 2cm. Fruits in late May and early June.			
T3	C1	20-25	2,10
	C2****	25-35	2,50
Strong growing variety of blue honeysuckle with a large tasty fruit covered by a delicate wax coating. Distinguished by a dense, upright habit. Leaves - lanceolate, reaching about 6-10cm, slightly rolled up.			
T5	C1	20-25	2,10
	C1,5	25-30	2,50
	C2****	25-35	2,50
Variety with a very nice, compact habit and high growth strength. Leaves - oval, a bit smaller than the T3 variety, dark green colour. Fruit - big, tasty, barrel-shaped, covered in wax coating.			
Wojtek	C1	20-25	2,10
	C2****	25-35	2,50
Very early fruiting variety. Fruits are delicious with sweet flavour, barrel-shaped, very big up to 4cm length, navy blue. Yield of one plant can reach a few kilograms.			
Włoszebnica	C2****	25-35	2,50
Variety of medium growth strength and erected habit, growing up to 1.5m in height. Fruit - big, cylindrical, with average wax coating and deep blue colour. Fruit - quite big, reaching 2cm in length, with an uneven surface and a sweet-sour taste.			
Zojka	C1	20-25	2,10
	C2****	25-35	2,50
A variety with dark blue, bulky, barrel-like fruits, about 3 cm long. Valuable plant because of the very tasty and very healthy fruit.			

CORNELIAN CHERRY

(*Cornus mas*)

Cornelian cherry is a fruiting and ornamental shrub that occurs naturally in south-eastern Europe and south-western Asia. It bears fruit in August. Fruits are red, sweet, very tasty with a length of about 2cm and shape resembling olives. The fruit can be eaten raw and dried, but are also ideal for making preserves. The shrub has a low soil requirement, prefers a pH from slightly acidic to neutral. It is increasingly popular in Europe and North America, not only because of the fruit, but also its decorative value.

VARIETY	CONT.	HEIGHT	PRICE Euro
Cornus mas	C2	40-50	2,50
High erect shrub. Red fruit with the size of a small plum. Sweet and sour, tasty. They are suitable to be eaten raw. They can also be used to prepare the famous "dereniówka" liquor. Leaves changing colours in the autumn time are very decorative.			
Cornus mas 'Golden Glory'	C2	40-50	2,50
Cornelian cherry variety of erect habit. The fruit is large, red. They should be consumed as they soften, then they are tasty. Shrub grows up to 3-4m			

CRANBERRY

(*Vaccinium macrocarpon*)

Fast growing, creeping dwarf-shrub. It has healing properties: antibacterial and probiotic. Plentiful fruiting. Fruits red with diameter 1-1,5cm, can be eaten. Small leaves. Requires moisture and acid soil. Is also used as a decorative plant.

VARIETY	CONT.	BRANCHES LENGHT	PRICE Euro
Ben Lear Early, very fertile variety with bright pink or white flowers and dark red, large fruit. It blooms in late spring. Creeping habit, stems rigid, grows slow.	1	20-40	2,25
Corallium Variety with bright pink flowers and round, red fruits. Low, creeping shrub, growth up to 1 meter height.	1	20-40	2,25
Macro Hoves Strong growing, late variety. Makes plenty, rigid and upward fruit-shoots. Straight and compact habit. Flowers bright pink, fruits red, oval.	1	20-40	2,25
Pilgrim Strong growing, late variety with loose habit. Fruits are big, 2cm long, oval, bright red, yellow at leafstalk with wax coating. Plentiful fruiting.	1	20-40	2,25
Red Star Slow growing variety with rigid stems and small leaves. Fruits deep red of medium size.	1	20-40	2,25
Stevens Medium growing variety. Characterized by plentiful fruiting. Fruits are big, deep red. Makes plenty fruit-shoots.	1	20-40	2,25

GOJI BERRY

(*Lycium barbarum*)

Wolfberry, popularly known as Goji berry, is a fruiting shrub of the nightshade family that produces small, oblong, red, edible fruit about 2cm long, of a bitter-sweet taste and after drying, sweet and sour. Goji berries are considered one of the healthiest fruits in the world. For thousands of years the healing properties of Goji berries have been used in traditional Chinese and Japanese medicine. It's fruiting in summer (August-September). Stems covered with thorns, leaves lanceolate, oblong, with a length of up to 10cm, grows to about 1-3m high. High frostresistance up to -30°C. It needs permeable soil, of a pH of neutral to slightly alkaline.

VARIETY	CONT.	HEIGHT	PRICE Euro
Big Berry Variety of big, sweet juicy fruit and light red colour, reaching 2-2.5cm long. The shrubs start fruiting at the age of 2-3 years. They ripen from August to October. Leaves of this variety are oval, of length 5-8cm, light green and limp stems.	C2	40-60	2,70
Korean Big Variety of big orange-red oval fruits, reaching 1.5-2cm long, sweet taste with a hint of bitterness. After drying, loses the bitter taste. Ripen from August to October. Leaves - light green, oblong, of length 6-10cm. Habit - dense; stems - limp.	C2	40-60	2,70
New Big One of the most popular varieties of Goji berry; of big, oval fruits reaching 1.5-2cm in length, sweet taste and an orange-red colour. The plants bear fruit at a very young age. The fruits ripen from August to October. Leaves - light green, lanceolate, of length about 6-10cm. Habit - dense; stems delicate and limp.	C2	40-60	2,70
Sweet Berry Variety of big, very sweet, oval fruit with a light red colour, reaching about 1.5cm in length. Ripening takes place in summer and lasts to until the first frost. Leaves - oval, of length 5-8cm, light green and limp stems.	C2	40-60	2,70
